How to set up your Wellhub CMS integration

Integrating your Club Management System (CMS) with Wellhub is one of the most effective ways to automate processes, reduce manual tasks, and offer a seamless experience for your members. With an active integration, check-ins and bookings can be handled automatically — which means less manual work for your staff and more agility for your clients.

What is a CMS & How integration works

A CMS — or Club Management System — is a tool used to run your gym or studio operations. It typically allows you to manage:

- **Member Data:** Client registration and member profiles.
- **Schedules:** Class timetables and real-time availability.
- **Access Control:** Physical entry check points like turnstiles, QR codes, or PIN pads.
- **Financial History:** Payments, active plans, and general usage history.

If you already use a system like this to manage your space, integration allows information to flow automatically between your CMS and the Wellhub

platform. Once it's active, some processes that were previously manual become automatic — such as check-in validation and schedule syncing — depending on the CMS you use and how your unit is configured.

What is a “Complete Validation”?

At Wellhub, a complete validation (also called a full handshake) happens when:

- The user checks in via the Wellhub app.
- The partner confirms the user’s presence (via Portal or CMS).
- The Wellhub system validates all plan rules.

This rigorous backend process ensures absolute payment accuracy and provides a significantly more reliable experience for your users.

Why integrate your system with Wellhub?

Connecting your CMS to Wellhub offers multiple business benefits for your daily operations:

- **Fewer Errors:** Automation drastically reduces the operational risk of manual mistakes.
- **More Efficiency:** Your front-desk team saves precious time on manual validations and can focus entirely on client service.
- **Reliable Payments:** Check-ins are validated correctly and in real time, ensuring you get paid accurately and strictly on time.
- **Smooth User Experience:** Members check in quickly, book real-time availability, and access your facility confidently.

- 🚀 **Increased Results:** Partners with an active API integration see up to 40% more validated check-ins compared to those running manual operations.

What types of integration are available?

Depending on your business style and your technical infrastructure, you can choose how your data syncs:

If you use check-in only (access control): Check-ins must be validated within 20 minutes to be eligible for payout. After the user's first registration, future validations happen automatically via your CMS.

If you use bookings only: Classes must be correctly created and synced from your CMS. The check-in button becomes available 30 minutes before the class, and the class must be marked as "Completed" in your system to generate the payout.

If you use both check-in + booking: Users must both book and check in via the app. Your CMS must validate both the booking and presence to ensure

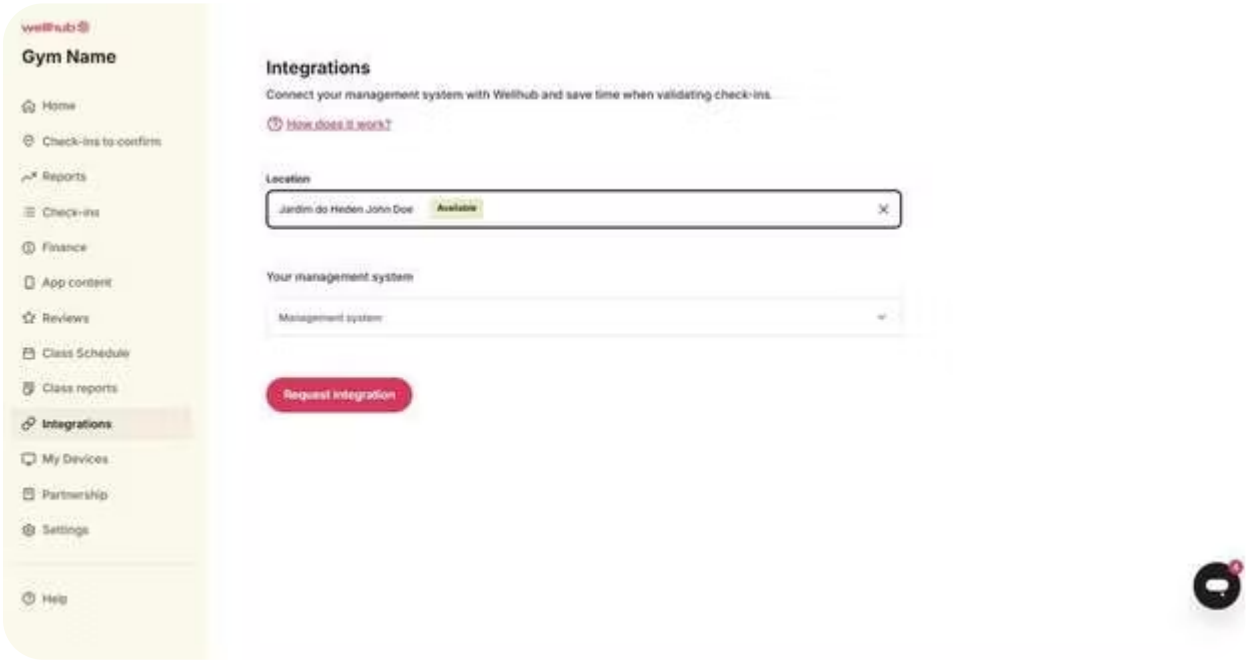

they are properly matched and finalized.

How to request integration

If you are ready to review your technical setup or request an integration evaluation, follow these simple steps inside the Partner Portal:

1. Log in to the **Partner Portal.**
2. Click on **Integrations** in the side menu.
3. Select your location and your CMS (if your CMS isn't listed, you can still request an evaluation).
4. Click **Request Integration**.

Our engineering team will review your system capabilities and follow up with the next technical steps if the connection is available and feasible. You can track the status of your request directly in the Integrations menu.

Need help with your integration?

Our system library contains a full list of CMS platforms mapped and currently compatible with Wellhub, organized alphabetically. There, you will also find direct links to each system's specific integration guide.

⚠️ **Note:** A CMS being listed in our corporate library does not guarantee automatic integration. Each request is reviewed individually to ensure it meets all technical and operational requirements.

If you experience any technical issues related to your active integration (such as CMS sync delays, check-in errors, turnstile issues, or schedule display glitches), please use our official support channel: **Wellhub Help Center**.
When contacting us through the **Help Center** , make sure to include the following details to speed up your support resolution:

- Your unit name;
- Your Partner ID;
- The CMS you're using;
- A clear description of the technical issue.
